

As a Marine Corps veteran and a heavily technical person, I am interested in having the opportunity to exercise my skills in finance while; auditing and processing data models to be loaded into commission software, updating and maintaining sales rep info and compensation plans in commission software, keeping management apprised of issues and looking for root causes until issues are resolved, and becoming a power user and providing technical support with the commission software. I am ready to review and analyze performance, trends, and processes towards the goal of identifying and implementing opportunities for improvements/efficiencies within the commission and bonus calculations method. I am also prepared to communicate and collaborate via regular meetings and interactions with teams, back-end developers, and multiple departments on differing projects. All the while bringing technical skills like advanced Excel, data auditing, and data verification to the table. Additionally I am a recent graduate of University of Richmond's Full Stack Web Development Cohort which strengthens my verbal and written communication, individual and teamwork, problem solving, driving change, handling multiple responsibilities with limited guidance, and interacting with all levels and departments..

I am continuously looking forward to continuing my education, strengthening my skills, building relationships with; teammates, supervisors, and subordinates. I believe deeply in personal growth and making others successful in the process. I am looking for the opportunity to bolster my career in analytics, leveraging my current skills and abilities as I gain even more mastery leading to internal advancement.
